Code Review of Assignment 1

1. Code Example – navigation bar

Code Snippet

```
<nav>
        <center>
         <a href="index.html">Home</a> |
         <a href="education.html">Education</a> |
         <a href="experience.html">Experience</a> |
         <a href="projects.html">Projects</a> |
         <a href="contact.html">Contact</a>
     </center>
</nav>
```

Current Outcome: In the current website, the navigation bar is written directly into each web page. The code works but it is repetitive and difficult to edit. This is because if I want to change any part of the navigation bar I have to change it on each page. Additionally, the tag is used, which is outdated in modern HTML.

Desired Outcome: The navigation bar should still appear on every page but it should be written using a reusable JavaScript block. It should also use CSS instead of the tag to properly center the content and, improve the design by adding a background color and styling the links.

New Code Snippet:

In HTML FILE:

```
<div id="navbar"></div>

<link rel="stylesheet" href="style.css">

<script src="script.js"></script>
```

In JavaScript File;

```
document.getElementById("navbar").innerHTML = `

<nav>

        <a href="index.html">Home</a> |

        <a href="education.html">Education</a> |

        <a href="experience.html">Experience</a> |
```

```
            <a href="projects.html">Projects</a> |
            <a href="contact.html">Contact</a>
  </nav>';
```

In CSS File

```
.navbar {
        background-color: black;
        padding: 15px;
        text-align: center;
}

.navbar a {
            color: white;
            margin: 0 10px;
            text-decoration: none;
}
```

New Outcome: The new outcome of the of the code is a navigation bar created through JavaScript. The website still looks the same, but it can be maintained form one place now. Additionally, the CSS is used to center the navigation bar and improve its appearance by making the background color black and the text white. I also removed the line from under the link to give it a more modern look.

2. Code Example

Code Snippet

```
<h2>Connect With Me</h2>
a.          <p>
b.              <a href="https://www.linkedin.com/in/chukwunonso-daniel-
   ekweaga/" target="_blank" rel="noopener noreferrer">LinkedIn</a><br>
c.              <a href="https://github.com/danekweaga" target="_blank"
   rel="noopener noreferrer">GitHub</a>
d.          </p>
e.
f.          <h2>Email</h2>
g.          <p><a
   href="mailto:danielekweaga@gmail.com">danielekweaga@gmail.com</a></p>
h.
```

Current Outcome: In the current website, all the contact information is shown right away. The code works, but the page is static and does not respond to user interaction.

Desired Outcome: The contact information should not be shown immediately when the page loads. Instead, it should be hidden and only appear when the user clicks a button. This would make the page more interactive and show how JavaScript can be used to control what is displayed on the screen based on user input.

\

In HTML File:

```
<h2>Contact</h2>

<button onclick="toggleContact()">Show / Hide Contact Info</button>

<div id="contactInfo" class="hidden">

  <h3>Connect With Me</h3>

  <p>

    <a href="https://www.linkedin.com/in/chukwunonso-daniel-ekweaga/"
target="_blank" rel="noopener noreferrer">LinkedIn</a><br>

    <a href="https://github.com/danekweaga" target="_blank" rel="noopener
noreferrer">GitHub</a>
```

```
    </p>
    <h3>Email</h3>
    <p>
      <a href="mailto:danielekweaga@gmail.com">danielekweaga@gmail.com</a>
    </p>
  </div>
```

In CSS File:

```
.hidden {
  display: none;
}
```

In JavaScript File:

```
function toggleContact()
{
  const section = document.getElementById("contactInfo");

  if (section.style.display === "block")
  {
   section.style.display = "none";
  } else {
  section.style.display = "block";
   }
}
```

New Outcome: In the new version, the contact information is hidden at frst and only appears when the user clicks the button. The page is now more interactive and uses JavaScript to control what is displayed.
